UBUNTU SERVER WITH WORDPRESS OR HTML BY PUTTY (SSH)

1. Bikin Ubuntu server di virtual box

2. Konfigurasi ssh

IP address di ubuntu (192.168.43.51):

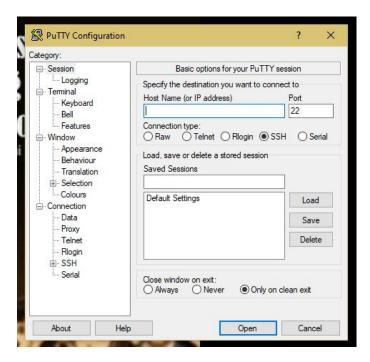

```
🔞 🖨 📵 icr@icr-VirtualBox: ~
icr@icr-VirtualBox:~$ ifconfig
           Link encap:Ethernet HWaddr 08:00:27:c6:44:50

3. Install putty

Putty di Windows:

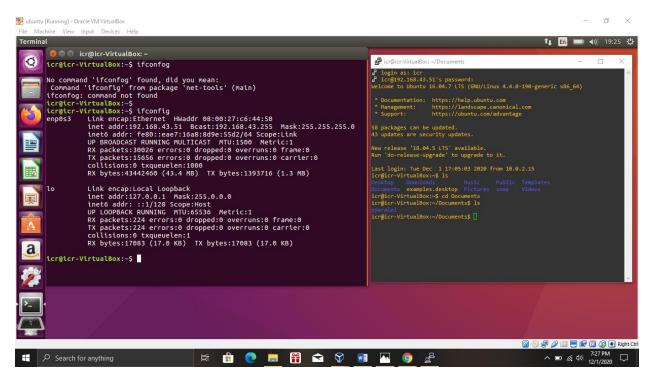

4. Remote by putty or remote ssh terminal

Remote by putty (windows):

Pada ubuntu ini, saya menggunakan mode bridge adapter, agar ubuntu berada di satu jaringan dengan host (windows) sehingga dapat saling berhubungan. Cek terlebih dahulu ip address yang ada di ubuntu, yaitu ip address: 192.168.43.51. Kemudian remote

dengan putty yang ada di windows. Apabila sudah bisa remote, maka cek isi folder-folder yang ada didalam server ubuntu tersebut (192.168.43.51) untuk melihat apakah server tersebut dapat diakses. Dan hasilnya, server tersebut dapat diakses.

Remote ssh terminal (cmd windows):

```

5. Buat aplikasi wordpress di Ubuntu server or html

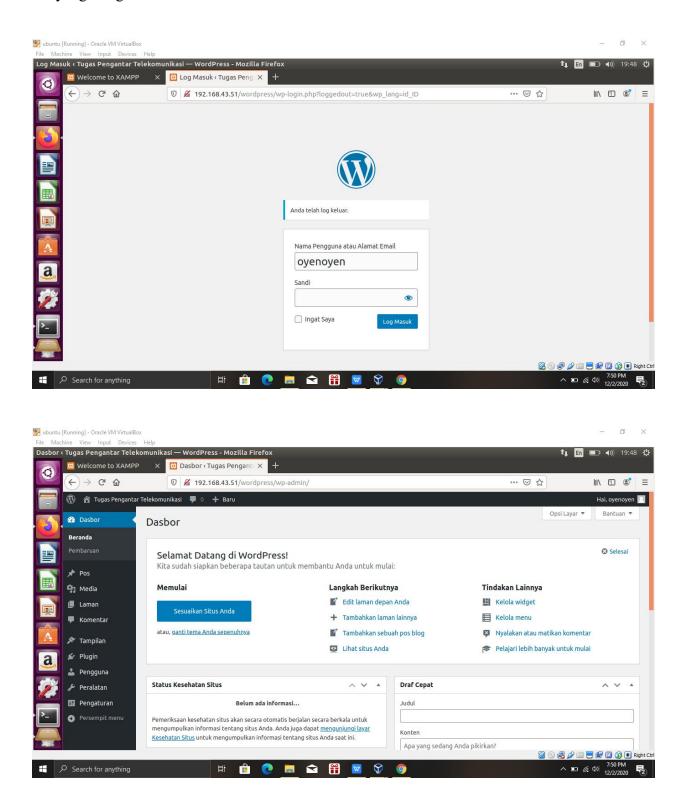

Disini saya menggunakan xampp package (binary, with .run file extension). XAMPP terdiri dari Apache, MariaDB, PHP, dan Perl. Pada xampp perlu mengaktifkan di bagian manage servers, yaitu MySQL Database (aktif), ProfTPD, dan Apache Web Server (aktif) agar web dapat diakses.

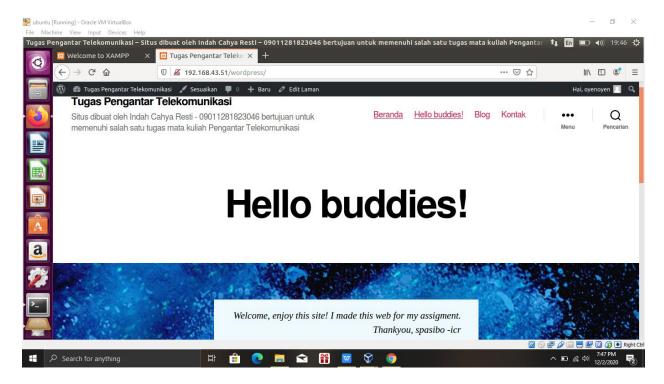

Ketikkan http://localhost/phpmyadmin dan login sesuai yang telah diatur sebelumnya, masuk ke halaman database dan buat database dengan nama wordpress.

Jalankan wordpress pada http://localhost/wordpress, kemudian buat database sesuai yang diinginkan.

Berikut hasil tampilan wordpress di ubuntu : (link web server : 192.168.43.51/wordpress/)

Berikut hasil tampilan di windows:
